

## ONE OF THE MOST TECHNOLOGICALLY ADVANCED ANCHORS ON THE MARKET

It is designed with two expandable wings that grip tightly behind the drywall for maximum holding power. Its advanced cam action technology expands; thereby creating an additional pressure against the side walls of the drywall or masonry. This also provides more stability and strength.

**COMBINED  
HEAD**  
Phillips & slot

- Easy to install
- Superior holding power
- 2 Expandable wings that grip tight behind drywall
- 2 Lateral wings hold the anchor in place. preventing any rotation while the screw is inserted
- Available sizes: x-small, small, medium and large

### INSTALLATION PROCESS

1. Drill the appropriate hole into drywall /wallboard, brick or concrete.
2. Insert the TripleGrip® into the hole.
3. Insert the screw through the object you need to affix and screw into the TripleGrip®.
4. Turn clockwise until a firm resistance.
